4D Treatment Workshop for Particle Therapy

Dates: 7-8 of December 2018 Venue: Executive Conference Room The Alumni Hall "Frate" Hokkaido University, JAPAN

(Day 1)						
Time		Topic	Title	Speaker		
10:00	Welcome Remarks			Hiroki Shirato (Hokkaido University)		
10:30-12:00	<u>1. Session</u>	Clinical practice (State of the art photon & proton therapy)	Overview about clinical indications of moving targets - state of the art photon and proton treatment (35min+10min)	Shinichi Shimizu (Hokkaido University)		
			State of the art for moving targets treated in proton therapy (35min+10min)	Zhongxing Liao (MD Anderson Cancer Center)		
12:00-13:30	Lunch					
13:30-15:45	2. Session	4D treatment planning	4D strategies - proton specific margins, scan path optimization, spot size optimization, spot weight optimization, beam angle optimization, number of field optimization - what is worth further investigation? (35min+10min)	Tony Lomax (Paul Scherrer Institute)		
			Experience from the clinical implementation of TrueBeam SBRT and Gated VMAT (35min+10min)	Annie Hsu (Stanford University)		
			Patient specific QA for mobile indications - the value of log-files (35min+10min)	Antje Knopf (University of Groningen)		
15:45-16:00	Coffee Break					
16:00-17:00	<u>A. Site Tour</u>	Hokkaido University Hospital Proton Beam Therapy Center	Treatment room /Accelerate room tour Demonstration of beam delivery to moving phantom.			
17:00-18:30	Poster Session					
19:30	Reception (sponsored by Hitachi)					

[Day 2]

[Day 2]							
Time		Торіс	Title	Speaker			
8:30-10:45	<u>3. Session</u>	4D imaging	In-room 4DCT, 4DCBCT, fluoroscopy, Calypso (35min+10min)	Shinichiro Mori (National Institute of Radiology Science)			
			Surface imaging and internal imaging - what are they worth? (35min+10min)	Naoki Miyamoto (Hokkaido University)			
			4D MR imaging (from off-line towards online - what are the challenges/promises? (35min+10min)	Bas Raaymakers (University Medical Center Utrecht)			
10:45-11:00		Coffee Break					
11:00-12:30	4. Session		4D phantoms - what is available / what still needs to be developed? (35min+10min)	Yoshikazu Tsunashima (Saga HIMAT)			
			4D adapted treatment approaches - weekly adaptation, plan of the day, real-time tracking - what is clinical feasible? (35min+10min)	Paul Keall (Sydney Medical School)			
12:30-13:30	Lunch						
13:30 -15:00	5. Session	New impulses for 4D proton treatments	Personalized deep learning - Real-time projected-CTV contouring in X-ray fluoroscopy (35min+10min)	Toshiyuki Terunuma (University of Tsukuba)			
			How could artificial intelligence, deep learning or neural networks help us? (35min+10min)	Nikos Paragios (Ecole Centrale Paris)			
15:00 - 15:30	Summary	Highlights / report / list of definitions/ location & focus next year		Antje Knopf / Shinichi Shimizu			

As of 22/11/2018
